Entrepreneurship, Caribbean, Latin America; Entrepreneurs- Women

Abstract

This paper examines issues that female entrepreneurs face within Caribbean and Latin American countries (Jamaica, Puerto Rico, Martinique, Barbados, Cuba). These issues revolve around financial obstacles, traditional stereotypes, and balance between family and business. This statistical analysis with recommendation will help provide more information for a phenomenon that has not been researched to the fullest extent. The research was discovered through online literary sources and informative websites such as World Bank and GEM. The findings suggest a better outlook on how female entrepreneurs are being treated within these countries in their work and personal lives.
